

## Abstract

## Object oriented data processing

- 5 A method and arrangements in a computerised system for control operations is disclosed. The computerised is adapted for processing data associated with real world entities based on objects representing the real world entities. In the method at least one formal instance is created, the at least one formal
- 10 instance containing information regarding instantiation of at least one object. At least one formal instance is associated with one or more formal instances or groups of formal instances based on information of the type of said at least one object or the at least one formal instance.
